Publishing and Advertising Offices

Elsevier Science Ireland Ltd., Elsevier House, Brookvale Plaza, Eastpark, Shannon, Co. Clare, Ireland. Tel.: (+ 353) 61 709600, Fax: (+ 353) 61 709100/709101. Authors wishing to use e-mail to contact the Elsevier Science Production Editor for *Computers and Chemistry* may use the following address: chemistry.production@elsevier.co.uk. It is recommended that the journal name is put in the subject field of the message's "envelope" information.

Publication information: Computers & Chemistry (ISSN 0097-8485). For 2000, volume 24 is scheduled for publication. Subscription prices are available upon request from the Publisher or from the Regional Sales Office nearest you or from this journal's website (http://www.elsevier.nl/locate/compchem). Further information is available on this journal and other Elsevier Science products through Elsevier's website: (http://www.elsevier.nl). Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by standard mail (surface within Europe, air delivery outside Europe). Priority rates are available upon request. Claims for missing issues should be made within six months of the date of dispatch.

Orders, claims, and product enquiries: please contact the Customer Support Department at the Regional Sales Office nearest you: **New York**: Elsevier Science, PO Box 945, New York, NY 10159-0945, USA; phone: (+ 1) (212) 633 3730 [toll free number for North American customers: 1-888-4ES-INFO (437-4636)]; fax: (+ 1) (212) 633 3680; e-mail: usinfo-f@elsevier.com **Amsterdam**: Elsevier Science, PO Box 211, 1000 AE Amsterdam, The Netherlands; phone: (+ 31) 20 4853757; fax: (+ 31) 20 4853432; e-mail: nlinfo-f@elsevier.nl **Tokyo**: Elsevier Science, 9-15 Higashi-Azabu 1-chome, Minato-ku, Tokyo 106-0044, Japan; phone: (+ 81) (3) 5561 5033; fax: (+ 81) (3) 5561 5047; e-mail: info@elsevier.co.jp **Singapore**: Elsevier Science, No. 1 Temasek Avenue, #17-01 Millenia Tower, Singapore 039192; phone: (+ 65) 434 3727; fax: (+ 65) 337 2230; e-mail: asiainfo@elsevier.com.sg **Rio de Janeiro**: Elsevier Science, Rua Sete de Setembro 111/16 Andar, 20050-002 Centro, Rio de Janeiro - RJ, Brazil; phone: (+ 55) (21) 509 5340; fax: (+ 55) (21) 507 1991; e-mail: elsevier@campus.com.br [Note (Latin America): for orders, claims and help desk information, please contact the Regional Sales Office in New York as listed above]

K. Johannsen and **D. Britz**	33	Matrix stability of the backward differentiation formula in electrochemical digital simulation
A. A. Dobrynin	43	A simple formula for the calculation of the wiener index of hexagonal chains
M. Karelson and A. Perkson	49	QSPR prediction of densities of organic liquids
Shu Tao, Kin Che Lam, Jun Cao and **Bengang Li**	61	Computer simulation of metal complex dissociation during free metal determination using anodic stripping voltammetry
B. V. Alekseev, I. V. Kozhevnikov and **N. I. Koltsov**	69	The research computer method of the multiplicity of steady states of catalytic reactions
J. M. Figuera and **V. Menendez**	75	Determination of vibrational energy distribution in excited molecules from experimental data. New program and test
Hau-lai Ho, Wai-kuen Cham, Foo-tim Chau and **Jian-yong Wu**	85	Application of biorthogonal wavelet transform to the compression of ultraviolet-visible spectra
Jingke Zhu, Dezhao Chen and **Pingdong Wu**	97	Exploration of artificial neural system for simulation of the halogen-exchange fluorination reaction
Book Review **Nenad Trinajstić**	101	Phase equilibria, phase diagrams and phase transformations—their thermodynamic basis

NUMBER 2

J. D. Mozo, M. Domínguez, E. Roldán and J. M. Rodríguez Mellado — 101 — Automated impedance measurements in electrochemical cells

Thy-Hou Lin, Jia-Jiunn Lin, Wen-Jiun Peng and Jin-Hwang Liu — 109 — Common structural folds in several protein pairs searched by an iterative superposition algorithm

J. Szczygiel — 121 — Diffusion in a bidispersive grain of a reforming catalyst

A. J. Gorączko and J. A. Szymura — 135 — The prediction of relative abundance of isotopic clusters in mass spectrometry of coordination and organometallic compounds

Hongqing Cao, Jingxian Yu, Lishan Kang, Yuping Chen and Yongyan Chen — 143 — The kinetic evolutionary modeling of complex systems of chemical reactions

R. Reams, G. Chatham, W. Glunt, D. McDonald and T. Hayden — 153 — Determining protein structure using the distance geometry program APA

Ramaswamy Ramakrishna and Ramachandran Srinivasan — 165 — Gene identification in bacterial and organellar genomes using GeneScan

F. Stevens and T. P. Beebe Jr. — 175 — Computer modeling of graphite oxidation: differences between monolayer and multilayer etching

NUMBERS 3/4

INFORMATICS AND THE GENOME

Maxime Crochemore, Andrzej K. Konopka, Jean-Loup Risler and Pierre Rouzé — 187 — Preface: Informatics and the Genome

AREA 1: SEQUENCE ANNOTATION, MAP ASSEMBLY AND OTHER ALGORITHMIC ISSUES OF GENOMICS

Anders Gorm Pedersen, Pierre Baldi, Yves Chauvin and Søren Brunak — 191 — The biology of eukaryotic promoter prediction—a review

Yves Quentin, Catherine Voiblet, Francis Martin and Gwennaele Fichant — 209 — Protein-coding region discovery in organisms under-represented in databases

Laurence Vignal, Frédérique Lisacek, Joël Quinqueton, Yves d'Aubenton-Carafa and **Claude Thermes** 219 A multi-agent system simulating human splice site recognition

Michael Q. Zhang 233 Promoter analysis of co-regulated genes in the yeast genome

Heather Sasinowska and **Maciek Sasinowski** 251 An algorithm for the assembly of robust physical maps based on a combination of multi-level hybridization data and fingerprinting data

AREA 2: SEQUENCE COMPLEXITY AND OTHER STATISTICAL PROPERTIES

Andrei Gabrielian and **Alexander Bolshoy** 263 Sequence complexity and DNA curvature

Maxime Crochemore and **Renaud Vérin** 275 Zones of low entropy in genomic sequences

Wentian Li 283 Statistical properties of open reading frames in complete genome sequences

AREA 3: SEQUENCE COMPARISON, DATABASES AND DATABASE SEARCHES

J-C. Aude, Y. Diaz-Lazcoz, J-J. Codani and **J-L. Risler** 303 Applications of the pyramidal clustering method to biological objects

J. P. Comet, J. C. Aude, E. Glémet, J. L. Risler, A. Hénaut, P. P. Slonimski and **J. J. Codani** 317 Significance of *Z*-value statistics of Smith–Waterman scores for protein alignments

Jérome Gouzy, Florence Corpet and **Daniel Kahn** 333 Whole genome protein domain analysis using a new method for domain clustering

Jaap Heringa 341 Two strategies for sequence comparison: profile-preprocessed and secondary structure-induced multiple alignment

William R. Taylor and **Nigel P. Brown** 365 Iterated sequence databank search methods

AREA 4: RNA STRUCTURE PREDICTION

Ye Ding and **Charles E. Lawrence** 387 A Bayesian statistical algorithm for RNA secondary structure prediction

Ivo L. Hofacker and **Peter F. Stadler** 401 Automatic detection of conserved base pairing patterns in RNA virus genomes

NUMBER 5

K. Y. Tam — 415 — BUFMAKE: a computer program to calculate the compositions of buffers of defined buffer capacity and ionic strength for ultra-violet spectrophotometry

Kirk J. Ziegler, Leon Lasdon, Jerzy Chlistunoff and Keith P. Johnston — 421 — Optimization models for determining nitric acid equilibria in supercritical water

Aina W. Ravna, Knut E. Schrøder and Øyvind Edvardsen — 435 — A World Wide Web-service to aid the development of AMBER parameters using analogy to standard parameters

T. E. Simos — 439 — Dissipative high phase-lag order Numerov-type methods for the numerical solution of the Schrödinger equation

Shaoping Chu, Laurie A. McNair, Scott Elliott, Chung-Chieng A. Lai, Omar A. Hurricane, Richard P. Turco and Richard C. Dugdale — 447 — Ecodynamics and dissolved gas chemistry routines for ocean circulation models

Gilles Caporossi, Ivan Gutman and Pierre Hansen — 469 — Variable neighborhood search for extremal graphs IV: Chemical trees with extremal connectivity index

Petr Zamostny and Zdenek Belohlav — 479 — A software for regression analysis of kinetic data

Robert A. Marriott, Andrew W. Hakin, Jin Lian Liu and Mare R. Roussel — 487 — Automated statistical analysis of high temperature and pressure vibrating tube densimeter data

Maria Carolina Monard, Alicia Batana and Jorge A. O. Bruno — 493 — Calculation of the pressure dependence of anion polarizabilities in crystals

P. C. Chen, S. C. Tzeng and F. M. Chang — 503 — Molecular structures of dinitroanilines and trinitroanilines

NUMBER 6

T. E. Simos and P. S. Williams — 513 — On finite difference methods for the solution of the Schrödinger equation

B. Zhou, J.-Y. Li, J.-H. Yu, Y.-H. Xu, W.-G. Xu, N. Shi, S.-L. Qiu and R.-R. Xu — 555 — Systematic enumeration of two-dimensional layered aluminophosphates with $[Al_3P_4O_{16}]^{3-}$ stoichiometry

Nicolaas (Klaas) M. Faber 565 Modification of Malinowski's *F*-test for pseudo rank estimation revisited

Andrey A. Dobrynin and **Ivan Gutman** 571 The average Wiener index of hexagonal chains

Andy Cheok-man Chan, Samuel Chun-lap Lo, Foo-tim Chau and **Alexander Kai-man Leung** 577 Application of image analysis techniques to two-dimensional crossed immunoelectrophoresis study

Ján Mikuláš Lisý, Peter Šimon, Soňa Bafrncová and **Elena Graczová** 587 Least squares estimation of parameters in implicit models

Stéphane Noury, Xénophon Krokidis, Franck Fuster and **Bernard Silvi** 597 Computational tools for the electron localization function topological analysis

Book Reviews

Gail Hutchinson 605 Introduction to Bioinformatics

Gail Hutchinson 607 Structure and Mechanism in Protein Science: A Guide to Enzyme Catalysis and Protein Folding

instructions for authors

Preparation of Manuscripts

General. Only original papers will be considered. The receipt of a paper by the Editor is held to imply that submission for publication has been approved by all of the authors, that it has not previously been published in any language, that it is not under consideration for publication elsewhere, and that if accepted for publication it will not be published elsewhere without the written consent of the publisher. The official language of the journal is English. Papers will be reviewed for proper English construction. Authors for whom English is a foreign language are recommended to have the manuscript thoroughly checked and corrected before submission.

Organisation. Manuscripts should be typed double-spaced on one side of the page only, and with wide margins. The first page should contain the title, a list of authors' names, the affiliations and address(es) of the authors when the work was performed (new addresses should be given in a footnote), a short running title (less than 65 characters), a list of up to six keywords, and the telephone number, fax number and e-mail address of the corresponding author, who should be indicated by an asterisk.
The second page should contain a 50-250 word abstract of the paper.
The remainder of the paper should be organised into sections; for example, Introduction, Materials and Methods (including any mathematical principles and algorithms if appropriate), Results and Discussion. The final two sections may be combined. An Acknowledgement should be given if deemed necessary.

Keywords. Authors must provide up to six keywords at the end of the abstract to be used for future indexing and electronic searching.

Computer programs. Program descriptions, where necessary, should take the form of flowcharts, with short listings of pertinent sections of code. Program listings should be limited in length to that necessary to define the algorithm; since available space precludes the reproduction of lengthy program listings, code that can be reproduced by a skilled programmer should be omitted. However, authors do have an implied obligation to make the detailed code available to interested readers on request, either directly or through organisations such as the Quantum Chemistry Program Exchange.

Mathematical Expressions. All mathematical symbols may be either hand-written or typewritten but no ambiguities should arise. Explain the meaning of all symbols in the text where they first occur. Greek letters and unusual symbols should be identified in the margin. Distinction should be made between capital and lower case letters; between the letter O and zero; between the letter l, the number one and prime; between K and kappa. A vector will be printed boldface and to indicate this the letter should be underscored with a single wavy line. The numbers identifying mathematical expression should be placed in parentheses.

References. References should be identified in the text as follows: one author (Zupan, 1989); two authors (Zupan and Gasteiger, 1991); three or more authors (Sun et al., 1994). If there is more than one publication in a single year under the same authorship use Lucasius et al. (1991a, b) etc. The references at the end of the manuscript should then be arranged as follows:

Sun, L.-X., Xie, Y.-L., Song, X.-H.,Wang, J.-H.,Yu, R.-Q., 1994. Computers and Chemistry 18,103.
Zupan, J.,1989. Algorithms for Chemists. Wiley, Chichester.
Zupan, J., Gasteiger, J.,1991. Analytica Chimica Acta 248,1.

Titles of journals may be given in full or in the abbreviated forms conforming to those adopted by the Chemical Abstracts Service (Bibliographic Guide for Editors and Authors, The American Chemical Society, Washington, DC, 1974). Serial publications such as Advances in Enzyme Regulation should be listed in the same form as journals. References to chapters in monographs are listed as follows:

Fisman, W. H.,1973. Platinum catalysts. In: Advances in Platinum Catalysis, Smith, J. (Ed.), Vol. 2.
Pergamon Press, Oxford, p. 293.

Figures and Tables. These should be so constructed as to be intelligible without reference to the text; every figure, table and column being provided with both heading and legend. Each figure should be clearly marked on the reverse with the name(s) of the author(s) and the figure number. Captions should be typed on a separate sheet.

Figures should be submitted in a form suitable for direct reproduction. They should be provided as carefully prepared line drawings about twice the final size on plain white drawing paper. Laser printer output at 300 dots per inch for a two-to-one reduction on good quality paper is acceptable. Authors should take particular care to ensure that lettering on a figure will remain legible after reduction. Tables and program listings may be reproduced photographically directly from the authors' copy to avoid the introduction of errors. The same quality standards set for figures apply here. Character size should not be less than 10pt (0.14 in. or 3.5 mm).

Colour figures. One page of colour illustrations can be published free of charge in each article, provided colour is deemed scientifically necessary by the reviewers and by the editor. The cost of additional colour figures will be charged to the author. Each additional page will cost US$ 800. Colour illustrations should be submitted as original colour photographs, transparencies, or 35 mm slides. Polaroid colour prints are not suitable. Please submit colour photographs and transparencies close to the size expected in publication.

Submission

This may be by mail, fax, or, in certain circumstances, by e-mail.

Mail. Manuscripts should be submitted **in triplicate** to the Editor at the following address:

Professor M. James C. Crabbe
Wolfson Laboratory, AMS Building, University of Reading, Whiteknights, P.O. Box 228, Reading, Berkshire, RG6 2AJ, U.K. Tel: +44 (0) 118 9318894

Fax. If authors feel that manuscripts that can be reviewed from a faxed copy (i.e. usually without half-tone figures), then a **single** copy of the manuscript may be transmitted to the editor by fax, to the following number: *Fax:* + 44 118 9318894

Acknowledgement of receipt and the review decision will be returned by fax to the corresponding author.
Authors submitting by fax should also send a clean copy of the text and original artwork by surface mail.

E-mail. For letters, and manuscripts that can be transmitted and reviewed from an e-mail copy (figures may be a problem), then a single copy may be transmitted to the Editor by e-mail to the following address:

E-mail: m.j.c.crabbe@reading.ac.uk

Authors must include their normal mail address, fax, telephone numbers and e-mail address. Acknowledgement of receipt and the review decision will be returned by e-mail to the corresponding author where possible. **Authors submitting by e-mail should also send a clean top copy of the text and original artwork by surface mail.**

Disks. Authors should send the final accepted version of their article on a computer disk (3.5 or 5.25 HD/DD) along with the final hardcopy typescript to the editorial office. Please observe the following criteria:

(a) Do not send a disk until your paper has been accepted.
(b) Make sure that the disk and hard copy match exactly.
(c) Specify what software was used, including which release, e.g. Wordperfect 5.0.
(d) Specify what computer was used (either IBM compatible PC or Apple Macintosh).
(e) Include the text file and separate table and illustration files, if available.
(f) The text file should be single spaced. Place two returns after elements such as title, headings, paragraphs, figure and table call-outs. Otherwise, within a text block, avoid using returns at the end of each line. All textual elements should begin flush left (no paragraph indents).
(g) Follow the general Instructions for Authors on all points not covered by item (f).
(h) Keep a back-up disk for reference and safety.

Refereeing of Papers

All papers are subject to anonymous review by experts; authors will be provided with referees' comments. Authors may suggest potential reviewers (complete with addresses, fax and telephone numbers) for their papers, but the Editor is under no obligation to follow such suggestions. Authors may also suggest names of those they wish to be excluded from the review process. To expedite reviewing, it would be helpful if authors enclose two copies of their recent relevant papers, or papers in press.

Copyright Guidelines

Authors are requested to read the note on copyright published on p. ii of each issue. A Transfer of Copyright form will be sent out with the proofs of a paper. All authors must sign the 'Transfer of Copyright' agreement before the article can be published. This transfer agreement enables Elsevier Science Ltd to protect the copyrighted material for the authors, but does not relinquish the author's proprietary rights. The copyright transfer covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform or any other reproductions of similar nature and translations, and includes the right to adapt the article for use in conjunction with computer systems and programs, including reproduction or publication in machine-readable form and incorporation in retrieval systems. Authors are responsible for obtaining from the copyright holder permission to reproduce any figures for which copyright exists.

Correspondence

All correspondence with the Editors or Publisher should contain full reference to the paper concerned, i.e. the names of all the authors, the full title, the date of submission and the article nos. assigned by the Editor and Publisher (if known). Once the article has been accepted for publication all further correspondence should be sent to the Shannon office of Elsevier and not to the Editors. Address correspondence to The Issue Manager, Computers and Chemistry, Elsevier Science Ireland Ltd., Elsevier House, Brookvale Plaza, East Park, Shannon, County Clare, Ireland; Fax: +353 61 709111.

Proofs and Reprints

Proofs. Page proofs will be sent to the corresponding author for checking. Corrections to proofs must be restricted to printer's errors. Any substantial alterations other than these may be charged to the author.

Reprints. Authors are provided with 50 reprints free of charge. Further supplies may be ordered on the reprint order form which accompanies the proofs. Copies of the particular issue in which the article appears may also be ordered on this form, at a generous discount.
